SUMMARY

Senior Software Engineer with nearly 8 years of experience specializing in high-scale distributed systems and full-stack architecture. Proven track record of leading cross-functional teams to deliver enterprise-grade platforms, with a deep focus on system design, micro-services, and scalable infrastructure. Expert in React, Node.js, and Python/Django, with a focus on leveraging modern AI-assisted development workflows to drive engineering efficiency and code quality.

EXPERIENCE

IBM Software Labs · Kochi

Senior Software Engineer

May 2024 – Present

- Led front-end delivery of an enterprise data marketplace platform used across a global organisation to publish, discover, and govern data at scale.
- Built the full data product lifecycle UI in React + TypeScript — covering authoring, publication, version control, and role-based access management.
- Delivered end-to-end consumer subscription flows including search, filtering, approval workflows, and access provisioning.
- Drove frontend quality through comprehensive E2E test coverage, observability pipeline setup, and performance profiling.
- Architected and scaled a Node.js GraphQL orchestration layer to aggregate disparate microservices, reducing API calls by 30-40% and enabling type-safe data fetching.

- Led a 5-engineer team delivering a large-scale incident and operations management platform across multiple regions.
- Developed a Node.js backend service to handle API aggregations and manage data pipelines from MongoDB and Kafka into Snowflake, improving the efficiency of data streaming and storage.
- Built a shared React component library that cut feature development time and improved cross-team code consistency.
- Integrated an in-app onboarding flow that improved user activation rates and reduced support queries.
- Leveraged AWS services to support backend infrastructure, and integrated email and SMS notification services for operational alerting.

- Architected a low-latency event platform with WebRTC + Socket.io supporting 10,000+ concurrent users with real-time video and messaging.
- Built a drag-and-drop course creation engine in React for a global education platform across 30+ countries.
- Designed IoT analytics dashboards processing 5,000+ events/sec using React and WebSocket-based data streaming.
- Developed a React Native mobile app for an IoT monitoring platform, achieving full feature parity on iOS and Android.

- Built a full-featured e-commerce application using Django and MongoDB covering cart, orders, and authentication.

RECOGNITION

GEM Award

Going the Extra Mile — awarded at Capgemini for architectural ownership and delivery excellence.
