

Prince Paulose

Senior Software Engineer

princepaulose1996@gmail.com | +91 7591944220 | princepaulose.netlify.app

PROFESSIONAL SUMMARY

Senior Software Engineer with over 7 years of experience building scalable web applications and distributed systems using React, Node.js, and cloud technologies. Recently exploring AI-assisted development and LLM-based workflows to enhance engineering productivity. Additional hands-on experience building backend services with Python and Django.

CORE COMPETENCIES

Frontend: React, TypeScript, Next.js, Redux Toolkit, Micro Frontends, Web Accessibility, HTML/CSS, Puppeteer

Backend: Node.js, Express.js, Python, Django, REST APIs, GraphQL, BFF Pattern, WebRTC, Socket.io, Kafka, RabbitMQ

Databases: MongoDB, MySQL, Redis, NoSQL design patterns, event-driven architecture

Infrastructure: AWS, Docker, Jenkins, CI/CD pipelines, Jest, React Testing Library, E2E testing

PROFESSIONAL EXPERIENCE

IBM Software Labs · Kochi

May 2024 – Present

Senior Software Engineer

- Led front-end delivery of **IBM Data Product Hub** — an enterprise marketplace for data product discovery, governance, and lifecycle management — enabling business units across IBM to publish, share, and consume trusted data at scale.
- Implemented the data product **authoring and publication flows**, supporting a full lifecycle from Draft through Authoring to Published and Retired states, with version control and collaborator access management using role-based permissions (Admin, Editor, Viewer).
- Built end-to-end data consumer **subscription workflows** including discovery, filtering, approval flows, and access management, improving data discovery efficiency across business units.
- Engineered multi-modal data delivery capabilities, supporting **Apache Arrow Flight over gRPC** for high-performance live data streaming, direct downloads, URL-based access, and data extract delivery to target connections including **watsonx.data** and Azure Databricks.
- Contributed to data governance features including **data contracts** with Terms & Conditions and SLA enforcement, business domain organisation, and metadata enrichment pipelines that enabled producers to surface rich technical and business context for each asset.
- Leveraged **AI-assisted coding tools** to improve development efficiency, delivering high quality robust code and accelerate feature delivery across the product lifecycle.
- Drove front-end engineering quality through end-to-end test coverage, observability pipeline setup, and performance profiling of critical UI and API paths.

Capgemini · Bengaluru

Mar 2023 – Apr 2024

Lead Software Engineer

- Led a cross-functional team of **5 engineers** delivering a large-scale incident and operations management platform used by distributed teams across multiple regions.
- Designed and owned a **Backend-for-Frontend layer (Node.js + GraphQL)** that unified data access for React clients, reducing frontend API calls by ~30–40% and improving response times.
- Built shared component libraries and internal abstractions that reduced average feature development time and improved code consistency across engineering teams.
- Integrated a customer onboarding in-app interactive flow that familiarised users with all platform features, improving activation rates and reducing support queries.
- Leveraged **AWS** services to support backend infrastructure, and integrated **email and SMS notification services** for operational alerting.

- Recipient of the **GEM (Going the Extra Mile) Award** — recognised for outstanding architectural ownership and on-time delivery excellence.

Toobler Technologies · Kochi

Feb 2019 – Feb 2023

Senior Software Engineer

- Architected a low-latency **Interactive Event Management Platform** using **WebRTC and Socket.io**, supporting **10,000+ concurrent users** with real-time video, messaging, and event coordination.
- Built a modular **Course Creation engine** with a drag-and-drop React interface, enabling rich content authoring for a global education platform operating across **30+ countries**.
- Designed real-time **IoT Analytics Dashboards** processing **5,000+ events per second** using React visualisation components and WebSocket-based data streaming pipelines.
- Developed a **React Native** mobile application from scratch for the IoT monitoring platform, delivering full feature parity with the web product on iOS and Android.
- Built backend services and RESTful APIs using **Python and Django**, supporting data ingestion pipelines and internal admin tooling used by operations teams.
- Mentored a team of junior engineers and established full-stack best practices — covering code review standards, component architecture, and CI/CD workflows.

IPSR Solutions Ltd · Kochi

Aug 2018 – Jan 2019

Python Developer Intern

- Developed a fully functional **e-commerce clone** application using **Django and MongoDB**, implementing product listings, cart management, order processing, and user authentication.
- Contributed to REST API development and database schema design under senior engineer supervision.

KEY ENGINEERING PROJECTS

Smart Expense Tracker | React, Redux Toolkit, Node.js, MongoDB, Docker

Full-stack financial management platform built on decoupled microservices with a React/Redux frontend. Features JWT-based authentication, event-driven data consistency, and normalised Redux Toolkit caching for high-performance UI rendering.

EDUCATION & RECOGNITION

University of Calicut

2014 – 2018

B.Tech – Computer Science and Engineering

ADDITIONAL

Languages: English, Malayalam, Hindi
